About the fund

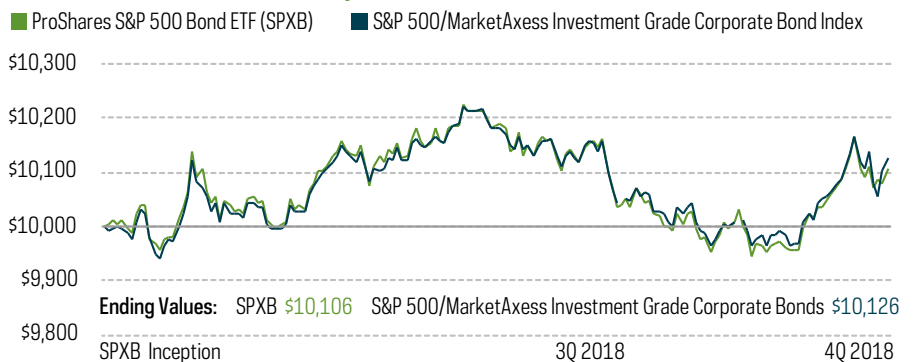

- SPXB is the first ETF investing exclusively in the bonds of the iconic S&P 500.
- The S&P 500 has been among the best known and most widely used U.S. equity benchmarks for decades.
 - SPXB's index selects bonds from S&P 500 companies.
 - The index seeks to select the most liquid investment grade bonds from companies in the S&P 500.
 - SPXB offers investors bond exposure with the cost efficiency, tradability and transparency of an ETF.

ProShares S&P 500® Bond ETF NAV Total Return	-0.50%	-	-	-	-	1.06%
ProShares S&P 500® Bond ETF Price Total Return	-0.29%	-	-	-	-	1.37%
S&P 500®/MarketAxess® Investment Grade Corporate Bond Index	-0.30%	-	-	-	-	1.26%

Periods greater than one year are annualized.

Growth of \$10,000 since inception⁴

The performance quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance quoted. Performance data current to the most recent month-end may be obtained by calling 866.776.5125 or visiting ProShares.com. Index performance does not reflect any management fees, transaction costs or expenses. Indexes are unmanaged and one cannot invest directly in any index.

Carefully consider the investment objectives, risks, charges and expenses of ProShares before investing. This and other information can be found in their summary and full prospectuses. Read them carefully before investing. Obtain them from your financial advisor or broker-dealer representative or visit ProShares.com. ProShares are not suitable for all investors.

Shares of any ETF are generally bought and sold at market price (not NAV) and are not individually redeemed from the fund. Brokerage commissions will reduce returns. ¹SPXB's total operating expenses are 0.15%. ²Definitions of terms: "30-day SEC yield" is a standard yield calculation developed by the Securities and Exchange Commission that allows investors to more fairly compare funds. The "weighted average maturity" (WAM) of a portfolio is the average time, in years, it takes for the bonds in a bond fund or portfolio to mature. WAM is calculated by weighting each bond's time to maturity by the size of the holding. Portfolios with longer WAMs are generally more sensitive to changes in interest rates. "Effective duration" is a measure of a fund's sensitivity to interest rate changes, reflecting the likely change in bond prices given a small change in yields. Higher duration generally means greater sensitivity. ³Returns are based on the composite closing price and do not represent the returns you would receive if you traded shares at other times. The first trading date is typically several days after the fund inception date. Therefore, NAV is used to calculate market returns prior to the first trade date. ⁴NAV total returns for the fund are used to calculate Growth of \$10,000. ©2019 PSA FS-2018-3886

Index description

S&P 500®/MarketAxess® Investment Grade Corporate Bond Index

The index selects and weights investment grade bonds based on the following criteria:

- Issued in the United States and denominated in U.S. dollars
- Have a remaining maturity of greater than or equal to one year as of the index's monthly rebalance date
- Have a maturity upon issuance of at least 2.5 years
- Have a minimum par amount of \$750 million

Bonds eligible to be included in the index are ranked based on their liquidity. No more than 1,000 of the most liquid bonds (i.e., those with the highest average trading volumes) are included in the index and weighted by market value. Bond issuances with higher market values are more heavily weighted than bond issuances with lower market values. The index is rebalanced monthly.

Investing involves risk, including the possible loss of principal. This ProShares ETF entails certain risks, including imperfect benchmark correlation and market price variance, that may decrease performance. Bonds will decrease in value as interest rates rise. The fund concentrates its investments in certain sectors. Narrowly focused investments typically exhibit higher volatility. Please see summary and full prospectuses for a more complete description of risks. **There is no guarantee any ProShares ETF will achieve its investment objective.**
